JAKE MOSHER

Fort Collins, CO | jake@jakemosher.dev | jakemosher.dev/portfolio | github.com/JakemoCode

SOFTWARE ENGINEER · FRONT-END ENGINEER · PRODUCT ENGINEER

Product engineer taking customer problems from discovery through launch and iteration, with AI throughout.
Building React/TypeScript products since 2019, from a $9.5M Rails and GraphQL product at Handshake.

CORE SKILLS & EXPERTISE

AI & agents: Claude Code (skills, subagents, hooks) | Cursor | agentic AI workflows | LLM tooling
Technologies: TypeScript | JavaScript | React | Next.js | Vite | WordPress |
Node.js | Ruby on Rails | Apollo + GraphQL | REST
Platform & delivery: GCP | Docker | PostgreSQL | MySQL | Redis | Vercel | CI/CD (GitHub Actions) | LaunchDarkly
Quality & craft: Vitest | Jest | React Testing Library | Playwright | CSS Modules | design systems | accessibility (a11y)

EXPERIENCE

Career Break, Family Time | Oct 2025 - Oct 2026

- Took time off to focus on family and our new baby.

Software Engineer, Handshake | Jan 2022 - Oct 2025

- Led front-end for Handshake's Employer Brand page, a customizable product generating $9.5M revenue and influencing $90M across ~500 customers; owned rendering and data-loading into the Rails monolith and its GraphQL endpoints through launch.
- Shipped analytics UI for Handshake's first ads product (Promotions beta) and worked in the Ruby GraphQL layer behind it, defining the types and response objects that hydrated the UI; adopted by major employers through the beta.
- Rewrote Employers Search, migrating legacy React/Redux surfaces onto hooks and Apollo in TypeScript (React Router, GraphQL); partnered with Design on accessibility.
- Worked with Handshake's Front-End Platform team to close gaps in the shared Rosetta and Keystone component libraries, standardizing reusable card patterns for complex entities and reducing one-off implementations across teams.
- Tested across the stack on nearly everything shipped: React Testing Library and Jest on the front end, Rspec and Capybara end-to-end against the Rails monolith.

Software Engineer, Demoflow | Aug 2021 - Dec 2021

- Shipped features and refactored brittle code in an early-stage React/Apollo codebase.

Associate Software Engineer, Uplight (Simple Energy) | Jun 2019 - Aug 2021

- Helped rebuild Uplight's Utility Marketplace on Salesforce Commerce Cloud (React/Prismic) and shipped a Free Products flow that drove 100K+ redemptions in its first month.

PROJECTS

pr-grade | Sep 2026 - Present | github.com/JakemoCode/pr-grade

- Published Claude Code code-review plugin that grades changes on nine lenses for defects correctness review misses, proving each finding by running code. Graded 790 merged PRs since September, improved through 36 of its own.

Baby Day Planner | May 2026 - Jun 2026 | baby-day-planner.vercel.app

- Mobile-first Next.js PWA in daily use that projects a day's infant-care schedule and recomputes it as events are logged, built on a 406-line plain-English domain model that replaced a 2,091-line spec.

EDUCATION

B.S. Physics (Engineering), University of Northern Colorado | Web Development Immersive, Galvanize
