

JAKE MOSHER

Mountain Time (US) | jake@jakemosher.dev | jakemosher.dev/portfolio | github.com/JakemoCode

SOFTWARE ENGINEER · FRONT-END ENGINEER · PRODUCT ENGINEER

Product engineer taking customer problems from discovery through launch and iteration, with AI throughout. Seven years on React and TypeScript products, four on Rails and GraphQL, from a \$9.5M product to client work.

CORE SKILLS & EXPERTISE

AI & agents: Claude Code (skills, subagents, hooks) | Cursor | agentic AI workflows | LLM tooling

Technologies: TypeScript | JavaScript | React | Next.js | Vite | Node.js | Apollo + GraphQL | REST | Ruby on Rails

Platform & delivery: GCP | Docker | PostgreSQL | MySQL | Redis | Vercel | CI/CD (GitHub Actions) | Playwright | LaunchDarkly

Quality & craft: Vitest | Jest | React Testing Library | CSS Modules | design systems | accessibility (a11y)

EXPERIENCE

Founder, Mosher Web Development LLC | 2026

- Built the AI-assisted delivery pipeline the business runs on: custom Claude Code skills and subagents, Playwright contract generation, and a WCAG 2.2 AA audit gating every project, axe-core against the full conformance chain.
- Shipped three client sites end to end as sole designer and engineer, including a full-custom React and TypeScript build and custom WordPress block themes.

Software Engineer, Handshake | Jan 2022 - Oct 2025

- Led front-end for Handshake's Employer Brand page, a customizable product generating \$9.5M revenue and influencing \$90M across ~500 customers; owned rendering and data-loading into the Rails monolith and its GraphQL endpoints through launch.
- Shipped analytics UI for Handshake's first ads product (Promotions beta), on Rails and GraphQL endpoints with Apollo data-fetching; adopted by major employers through the beta.
- Rewrote Employers Search, migrating legacy React/Redux surfaces onto hooks and Apollo in TypeScript (React Router, GraphQL); partnered with Design on accessibility.
- Worked with Handshake's Front-End Platform team to close gaps in the shared Rosetta and Keystone component libraries, standardizing reusable card patterns for complex entities and reducing one-off implementations across teams.
- Tested across the stack on nearly everything shipped: React Testing Library and Jest on the front end, Rspec and Capybara end-to-end against the Rails monolith.

Software Engineer, Demoflow | Aug 2021 - Dec 2021

- Shipped features and refactored brittle code in an early-stage React/Apollo codebase.

Associate Software Engineer, Uplight (Simple Energy) | Jun 2019 - Aug 2021

- Rebuilt Uplight's Utility Marketplace on Salesforce Commerce Cloud (React/Prismic), shipping rebate enrollment flows that drove 100K+ redemptions in the first month.

PROJECTS

Doc Distillation Gate (agentArena, ~7 devs) | Aug 2026 - Present | github.com/JakemoCode/docs-distillation-gate

- A pre-push hook and CI check enforcing doc compression that prints a procedure the coding agent runs inside the push it blocked. Rebuilt the metric after it penalized the restructuring it asked for.

Baby Day Planner | May 2026 - Jun 2026 | baby-day-planner.vercel.app

- Mobile-first realtime PWA that projects a day's infant-care schedule and recomputes it as events are logged, with realtime sync across two users. Next.js 16, React 19, TypeScript, CSS Modules, Vitest, RTL and Playwright.

EDUCATION

B.S. Physics (Engineering), University of Northern Colorado | Web Development Immersive, Galvanize
